About

Enthusiastic Techie with strong technical skills and a passion for innovation. Proficient in low-code tools, Javascript, C, React native, and web development. Seeking an opportunity at a leading tech company to apply my knowledge and gain hands-on experience in software development and problem-solving. Eager to contribute and learn.

Education

Bachelor of Technology (Computer Engineering)	2022-2026
Silver Oak University	CGPA :- 9.38
GHSEB 12th	2022
Nalanda Vidyalay	Overall Percentage:- 52.76%
GSEB 10th	2020
Nalanda Vidyalay	Overall Percentage:- 75.87%

Work experience

Brilworks Software Software developer August 2024 - Present	Worked at Brilworks as a mobile app developer specializing in FlutterFlow, React Native, and low-code tools. Built responsive mobile and web applications, integrated APIs, payment integration, Firebase, and Supabase, developed custom UI components, and collaborated with teams to deliver scalable, user-friendly solutions with optimized performance and modern app functionality.
---	--

Project

Ruggy : Tech Stack : React native Firebase Stripe Revenucat	• Migrated the app from a subscription-gated entry flow to a freemium model with a 14-day free trial, removing the upfront paywall so new users could reach core intake and tracking workflows before any payment step. • Built the trial and entitlement layer covering trial start, expiry, conversion, and cancellation states, keeping feature access decoupled from raw billing status so gating stayed correct through renewals, refunds, and grace periods. • Integrated in-app purchases for monthly and discounted annual plans across Google Play Billing and StoreKit, including purchase restore, receipt validation, and server-side handling of renewal and cancellation events. • Replaced link-based email verification with one-time codes, adding expiry, resend throttling, and attempt limits to reduce signup drop-off and support load. • Migrated existing paying users into the new plan structure without interrupting access, handling mid-cycle plan changes and previously cancelled accounts. • Rebuilt subscription and account management screens so users could view plan status, switch plans, and manage billing in-app.
--	--

PetFinder : Tech Stack : Flutterflow Firebase	• Built and shipped a pet adoption and lost-pet reporting app end to end as one of two developers, owning product scoping, UI design, implementation, Play Store release, and post-launch iterations. • Designed the Firestore data model and security rules for pet listings, user profiles, and community content, enforcing per-user write access and preventing unauthorized edits to others' listings. • Implemented location-based discovery with filters for breed, age, and distance, handling location permissions and fallback behavior when access is denied or unavailable. • Built image upload and delivery via Firebase Storage with client-side compression, keeping listing browse usable on slow connections. • Shipped a community feed after launch with photo posts, likes, and a user reporting flow feeding a moderation queue for flagged content. • Managed the full release process: Play Console setup, data safety and content rating declarations, staged rollout, and triage of crash and review feedback into follow-up releases.

SOS Pâtisserie :

Tech Stack :
Flutterflow
Firebase
Open AI
Revenucate

- Built and shipped an AI baking assistant for a Paris-based client, answering user questions on failed recipes, ingredient substitutions, and recipe scaling in French.
- Integrated [OpenAI] through a Cloud Functions proxy so the API key never shipped in the client, with request validation and per-user rate limiting to cap cost exposure.
- Designed a credit-based monetization model with 5 free questions on install and consumable credit packs via Google Play Billing, granting and decrementing credits server-side after purchase verification so balances could not be manipulated client-side.
- Implemented anonymous authentication so users could try the assistant with no signup, preserving credit balance across sessions and on later account creation.
- Constrained assistant scope to the pastry domain through system prompt design and output formatting, keeping responses short, actionable, and reliably in French.
- Owned delivery end to end: UI design, IAP configuration, Play Console release, and data safety and content rating declarations.

skills	Programming	
Teamwork	React Native	SQL
Quick Learner	Flutterflow	Snowflake
Time management	Adalo	Xano
Multitasking	Webflow	Shopify
Debugging	Firebase	
Problem-solving	Supabase	
Highly Motivated	Python	
	Javascript
